

**ABSTRACT OF THE DISCLOSURE**

A small memory card of present invention includes a substrate and at least one memory chip package, the substrate is formed with a placed region, a first terminal and a second terminal, the first terminal is formed with a plurality of golden fingers, the second terminal is formed with a pull slot, the substrate is inserted into an electric device, so that the plurality of golden fingers may be electrically connected to the electric device, and one memory chip package, which is arranged on the lay place of the substrate, electrically connected to the plurality of golden fingers. Thus, when the users operate the small memory card grasping the pull slot of the second terminal of the substrate by fingers, so that the small memory card may easily take out.
